

Olof Zetterqvist, AI-PhD student at Chalmers and WASP

- PhD student at Mathematical Sciences, Chalmers.
 - Johan Jonasson
 - Rebecka Jörnsten
- Project title: "Deep learning with noisy labels".
 - Robustness for machine-learning methods towards label contamination.

- PhD student at Mathematical Sciences, Chalmers.
 - Johan Jonasson
 - Rebecka Jörnsten
- Project title: "Deep learning with noisy labels".
 - Robustness for machine-learning methods towards label contamination.
- Financed by the Wallenberg AI, Autonomous System and Software Program, WASP.

- PhD student at Mathematical Sciences, Chalmers.
 - Johan Jonasson
 - Rebecka Jörnsten
- Project title: "Deep learning with noisy labels".
 - Robustness for machine-learning methods towards label contamination.
- Financed by the Wallenberg AI, Autonomous System and Software Program, WASP.
 - Includes me in the WASP graduate school.

- In September 2020 we were 293 active PhD students all over Sweden.
- Total goal of 400 graduated PhDs by 2029.

- In September 2020 we were 293 active PhD students all over Sweden.
- Total goal of 400 graduated PhDs by 2029.
- The graduate school is added on top of the existing PhD education at each university.

- In September 2020 we were 293 active PhD students all over Sweden.
- Total goal of 400 graduated PhDs by 2029.
- The graduate school is added on top of the existing PhD education at each university.
- WASP graduate school consists of two different tracks.
 - Autonomous Systems, AS-track.
 - Artificial Intelligence, AI-track.

- In September 2020 we were 293 active PhD students all over Sweden.
- Total goal of 400 graduated PhDs by 2029.
- The graduate school is added on top of the existing PhD education at each university.
- WASP graduate school consists of two different tracks.
 - Autonomous Systems, AS-track.
 - Artificial Intelligence, AI-track.
- Benefits of being a PhD student at WASP:
 - National courses designed for our specific track.
 - International research visits.
 - Study visits at Swedish industry partners.
 - Visiting lectures.
 - Cooperation with other universities, national and international.

- Mandatory courses:
 - AI-track: mandatory courses (27 hp)
 - Deep Learning and GANs (6 hp)
 - Graphical Models, Bayesian Learning, and Statistical Relational Learning (6 hp)
 - Artificial Intelligence and Society: Legal, Ethical and Societal Aspects of AI (3 hp)
 - Learning Theory and Reinforcement Learning (6 hp)
 - Scalable Data and Distributed Machine Learning (6 hp)
 - AS-track: mandatory courses (24 hp)
 - Autonomous Systems 1 - Sensing, Perception, Control and Decision Making (6 hp)
 - Autonomous Systems 2 - Learning, Knowledge, Interaction and Collaboration (6 hp)
 - Software Engineering and Cloud Computing (6 hp)
 - WASP Project Course (6 hp)
 - 4 elective (24 hp)
- Courses are given by departments at different Swedish universities (Chalmers, KTH, Linköping University, Lund University and Umeå University).

Events created by WASP

- Winter conferences
 - Presentations from different researchers.
 - Poster sessions.
 - Cluster meetings.

- Winter conferences
 - Presentations from different researchers.
 - Poster sessions.
 - Cluster meetings.
- Summer School.
 - "Latest in AI".
 - Project over the week.

Events created by WASP

- Winter conferences
 - Presentations from different researchers.
 - Poster sessions.
 - Cluster meetings.
- Summer School.
 - "Latest in AI".
 - Project over the week.
- International trips (Germany and Canada)
 - Max Planck Institute for Intelligent Systems.
 - RWTH Aachen University and Technical University Darmstadt.
